

The ABCs of Behavior Analysis

A REVIEW OF THE BASICS

National Autism Conference
Workshop
The Pennsylvania State University
August 2017

1

3

A presentation slide titled "Topics" with a list of eight items. The slide has a dark grey header with a home icon on the left and navigation arrows on the right. The content area is white with a light blue gradient background. The footer is dark grey with the number 4.

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

4

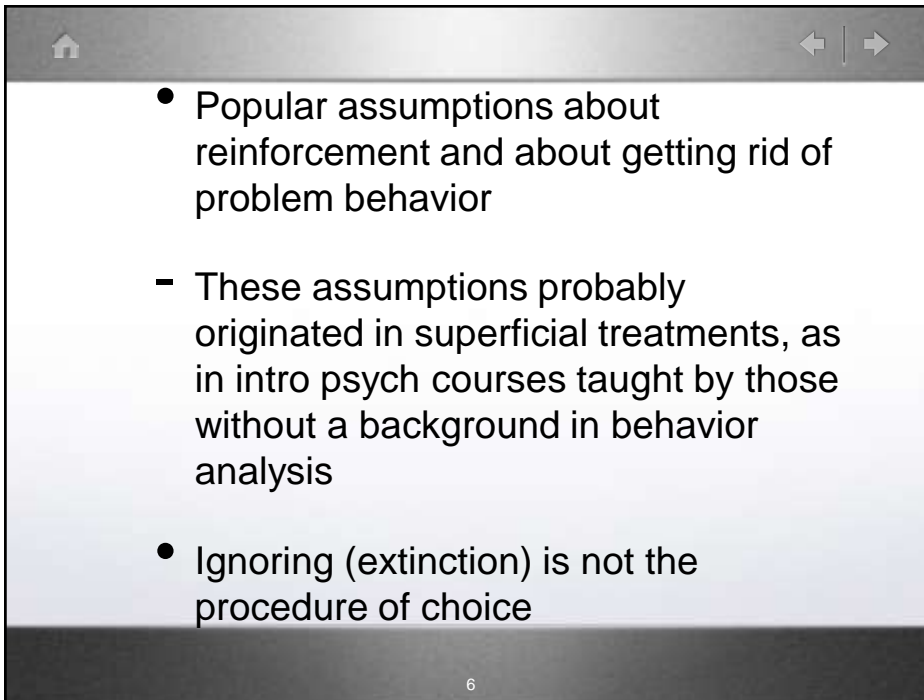

A presentation slide titled "Topics" with a list of eight items. The slide has a dark grey header with a home icon on the left and navigation arrows on the right. The content area is white with a light blue gradient background. The footer is dark grey with the number 5. The first item in the list is highlighted in red.

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

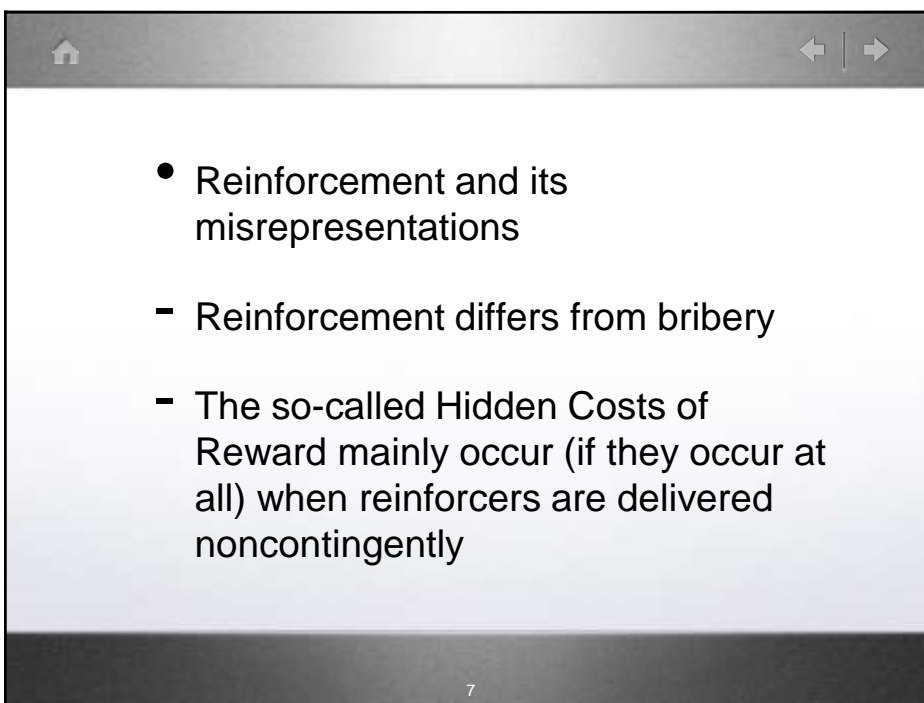

5

Slide 6 features a presentation interface with a grey header bar containing a home icon, a left arrow, a vertical line, and a right arrow. The slide content is on a white background with a light blue gradient at the bottom. It contains a bulleted list with three items. The first item is a main bullet point, and the second is a sub-bullet point. The third item is another main bullet point. A small number '6' is centered at the bottom of the slide.

- Popular assumptions about reinforcement and about getting rid of problem behavior
 - These assumptions probably originated in superficial treatments, as in intro psych courses taught by those without a background in behavior analysis
- Ignoring (extinction) is not the procedure of choice

6

Slide 7 features a presentation interface with a grey header bar containing a home icon, a left arrow, a vertical line, and a right arrow. The slide content is on a white background with a light blue gradient at the bottom. It contains a bulleted list with three items. The first item is a main bullet point, and the second and third are sub-bullet points. A small number '7' is centered at the bottom of the slide.

- Reinforcement and its misrepresentations
 - Reinforcement differs from bribery
 - The so-called Hidden Costs of Reward mainly occur (if they occur at all) when reinforcers are delivered noncontingently

7

- Reinforcement: Reinforcing responses or reinforcing organisms?
- Where is the response in self-reinforcement?

8

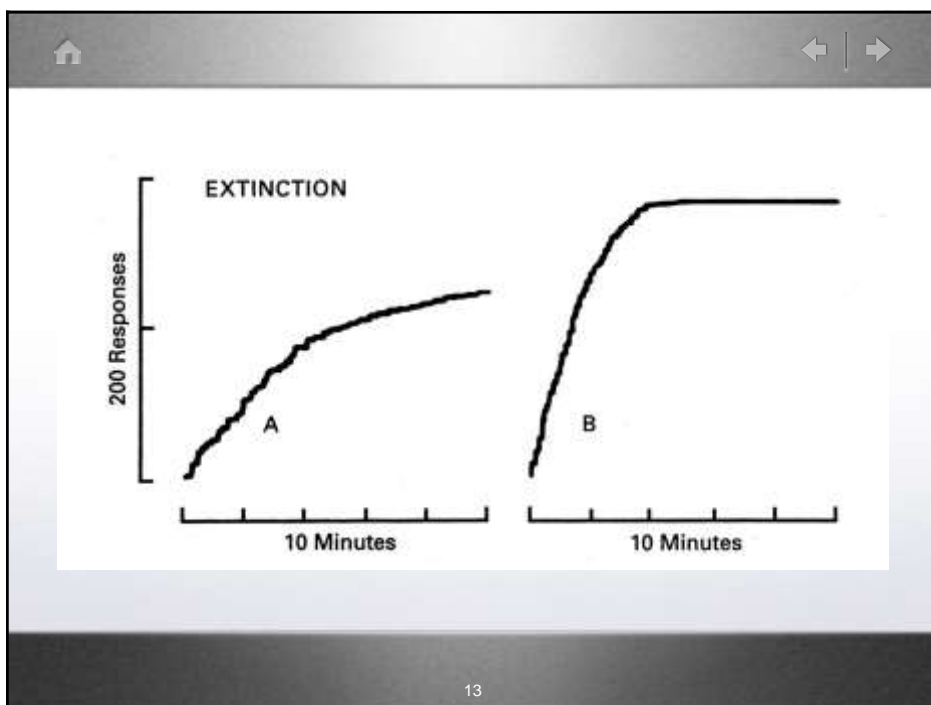

The Vocabulary of Reinforcement

<i>Term</i>	<i>Restrictions</i>	<i>Examples</i>
reinforcer (noun)	A stimulus	Food pellets were used as reinforcers for the rat's lever presses
reinforcing (adjective)	A property of a stimulus	The reinforcing stimulus was presented more often than other stimuli
reinforcement (noun)	As procedure: the delivery of consequences when a response occurs As outcome: the increase in responding following from the reinforcement	The fixed-ratio reinforcement schedule delivered food after every tenth key peck The experiment demonstrated reinforcement produced by social consequences
to reinforce (verb)	As procedure: to deliver consequences when a response occurs (responses are reinforced, not organisms) As outcome: to increase responding through a reinforcement procedure	When a period of free play was used to reinforce the child's completion of school work, the child's grades improved The experiment showed that gold stars did not reinforce cooperative play among first-graders

9

- The Side-Effects of Extinction
 - ▶ spontaneous recovery
 - ▶ disinhibition,
 - ▶ rapid reacquisition
 - ▶ emotional behavior

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

14

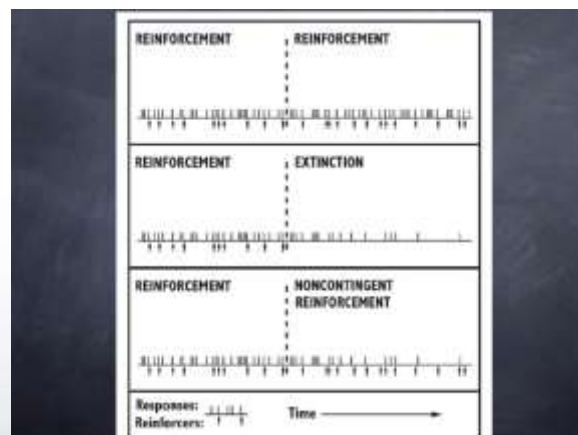

The distinction between contingencies and pairings

15

- The distinction between contingencies and pairings
 - Reinforcement
 - Extinction
 - Free or noncontingent reinforcement (NCR)

EXT / RT 20-s

30

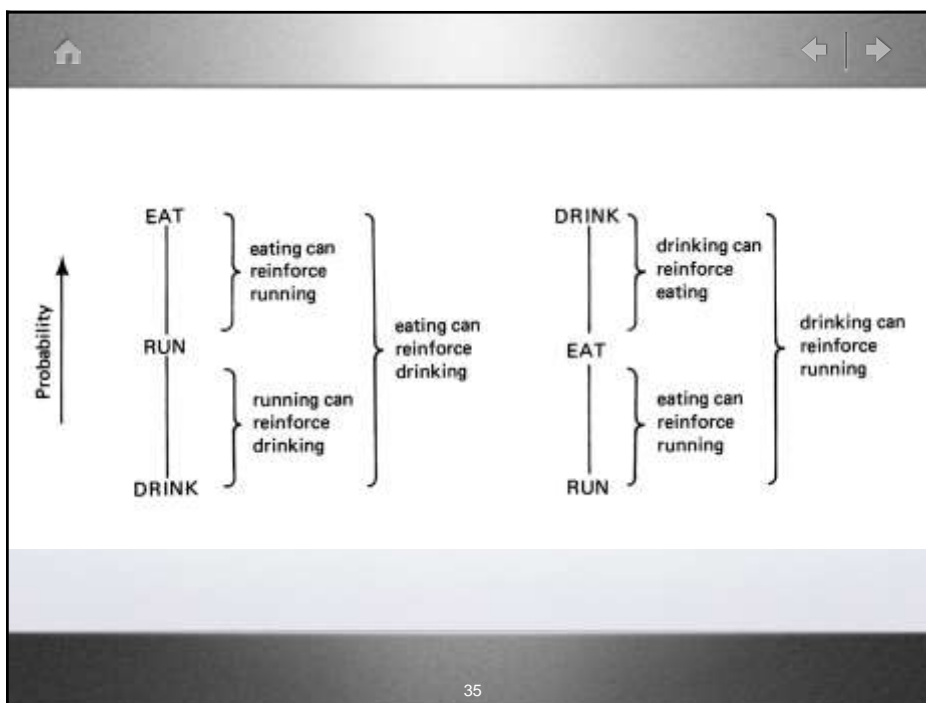

31

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- **Motivation: Establishing Operations**
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

34

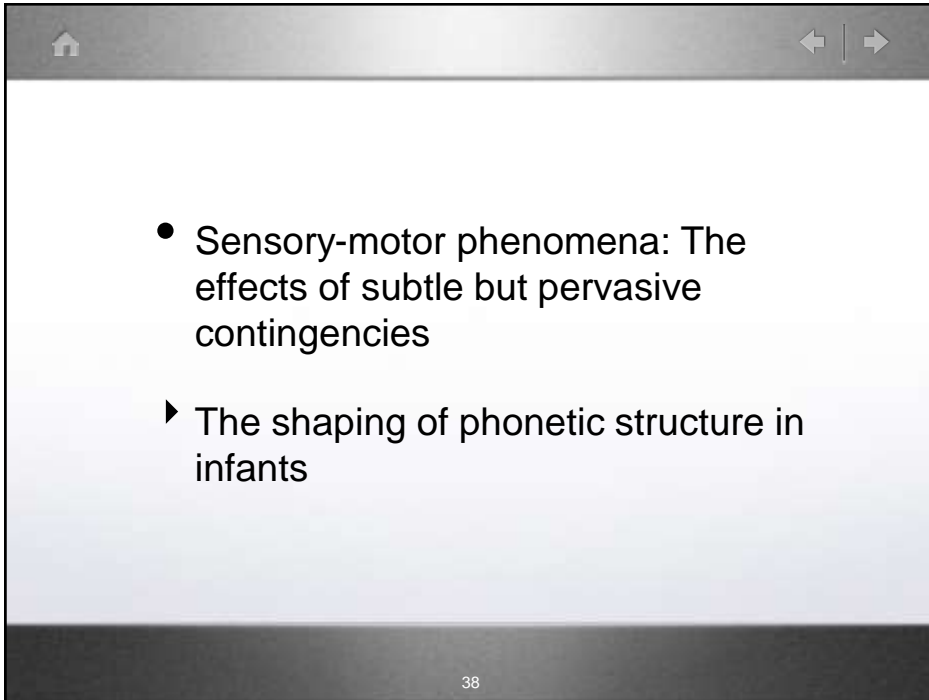

- Sensory-motor phenomena: The effects of subtle but pervasive contingencies

36

37

A presentation slide with a dark grey header bar containing a home icon on the left and navigation arrows on the right. The slide has a light blue gradient background. It contains two bullet points: a main bullet point and a sub-bullet point. The number 38 is centered at the bottom.

- Sensory-motor phenomena: The effects of subtle but pervasive contingencies
 - ▶ The shaping of phonetic structure in infants

38

A presentation slide with a dark grey header bar containing a home icon on the left and navigation arrows on the right. The slide has a light blue gradient background. It is currently blank. The number 39 is centered at the bottom.

39

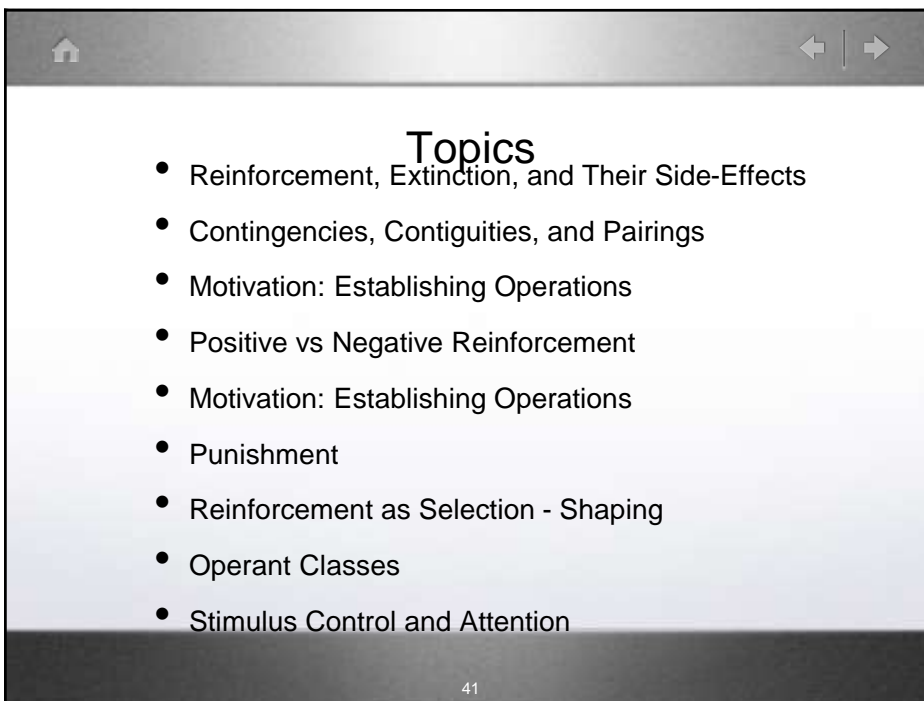

A presentation slide titled "Topics" with a list of nine items. The slide has a dark grey header with a home icon on the left and navigation arrows on the right. The background is light blue with a dark grey footer. The text "Positive vs Negative Reinforcement" is highlighted in red.

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- **Positive vs Negative Reinforcement**
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

40

A presentation slide titled "Topics" with a list of nine items. The slide has a dark grey header with a home icon on the left and navigation arrows on the right. The background is light blue with a dark grey footer. The text is identical to slide 40, but "Positive vs Negative Reinforcement" is not highlighted.

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Motivation: Establishing Operations
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

41

- Positive vs Negative Reinforcement
- Examples:
 - Food presentation and shock removal
 - Thirst and water reinforcers
 - Heat and cold
- Is there a behavioral criterion?

42

Criteria for Distinguishing Positive and Negative Reinforcement and Punishment

	<i>Responding Increases</i>	<i>Responding Decreases</i>
<i>Response Produces Stimulus</i>	Positive Reinforcement	Positive Punishment
<i>Response Removes or Prevents Stimulus</i>	Negative Reinforcement	Negative Punishment

43

44

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- **Punishment**
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

46

- Does punishment work?
- Criteria: Effectiveness while the contingency continues vs effectiveness after the contingency ends

47

48

- Side-effects of punishers

49

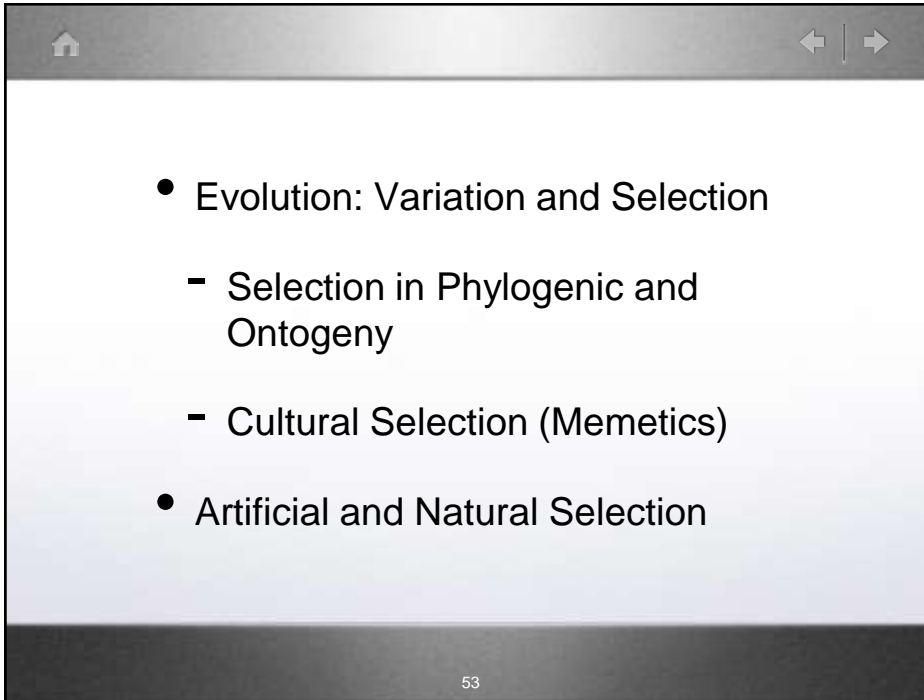

50

A screenshot of a presentation slide titled "Topics". The slide has a dark grey header bar with a home icon and navigation arrows. The content area is white and contains a bulleted list of topics. The slide number 52 is at the bottom center.

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

A presentation slide interface with a dark grey header bar. On the left of the header is a small white house icon. On the right are two white navigation icons: a left-pointing arrow and a right-pointing arrow, separated by a vertical line. The main content area is white and contains a bulleted list. The footer is a dark grey bar with the number 53 in white.

- Evolution: Variation and Selection
 - Selection in Phylogenic and Ontogeny
 - Cultural Selection (Memetics)
- Artificial and Natural Selection

A presentation slide interface with a dark grey header bar. On the left of the header is a small white house icon. On the right are two white navigation icons: a left-pointing arrow and a right-pointing arrow, separated by a vertical line. The main content area is white and contains a single bullet point. The footer is a dark grey bar with the number 54 in white.

- Shaping as Selection

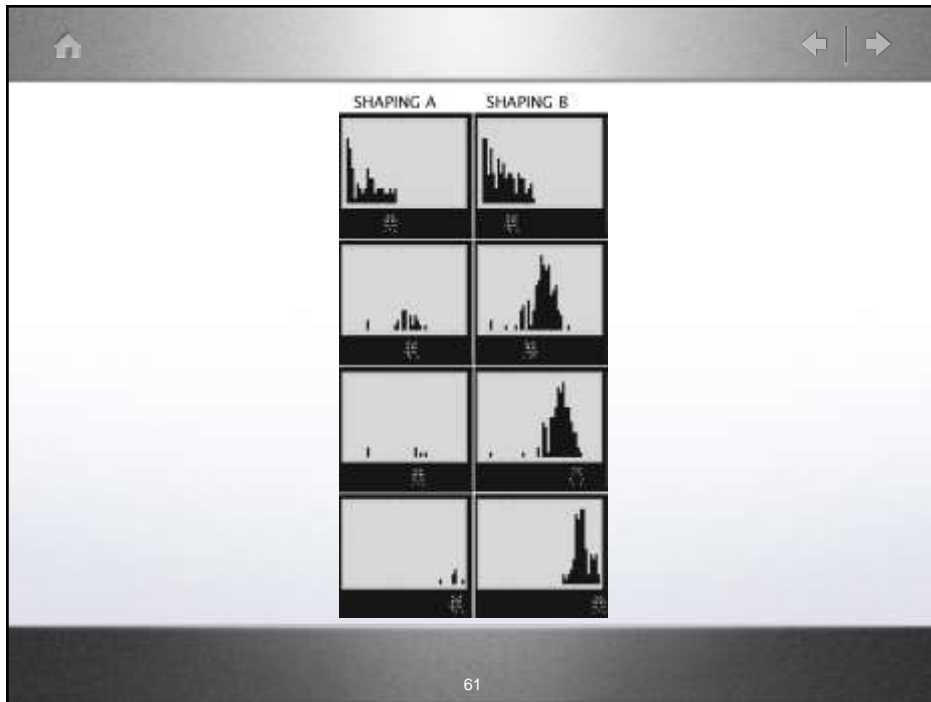

- The selection of behavior
- Shaping as a skill and (sometimes) as an art form
- Function vs topography in the creation of operant classes
 - Lever presses and key pecks
 - SIB, attention getting and their variants
 - Higher-order classes

57

59

- Shaping
 - Where did all of this come from?
- 62

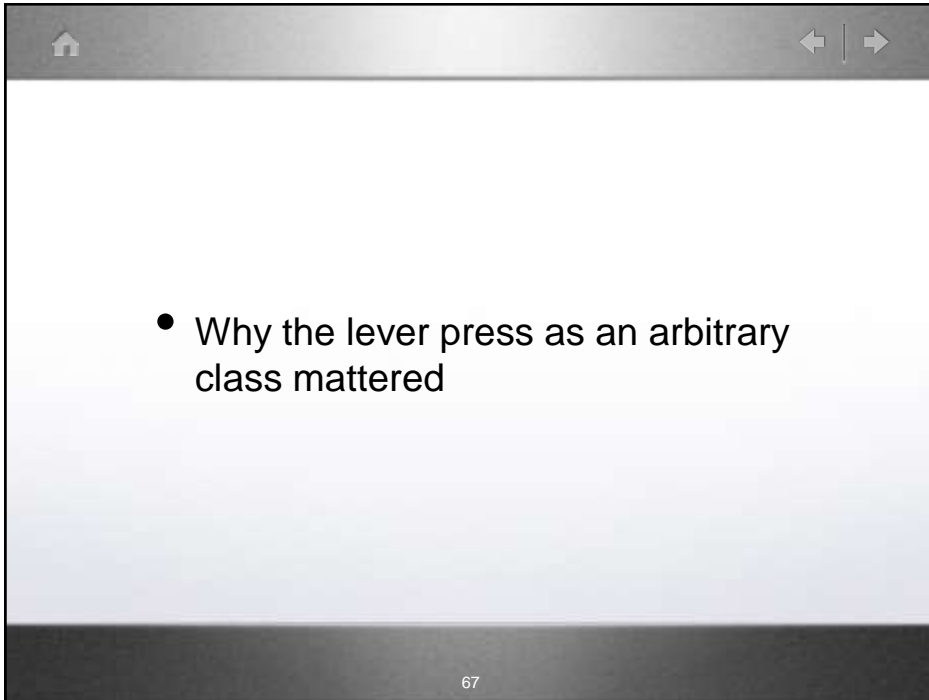

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- **Operant Classes**
- Stimulus Control and Attention

63

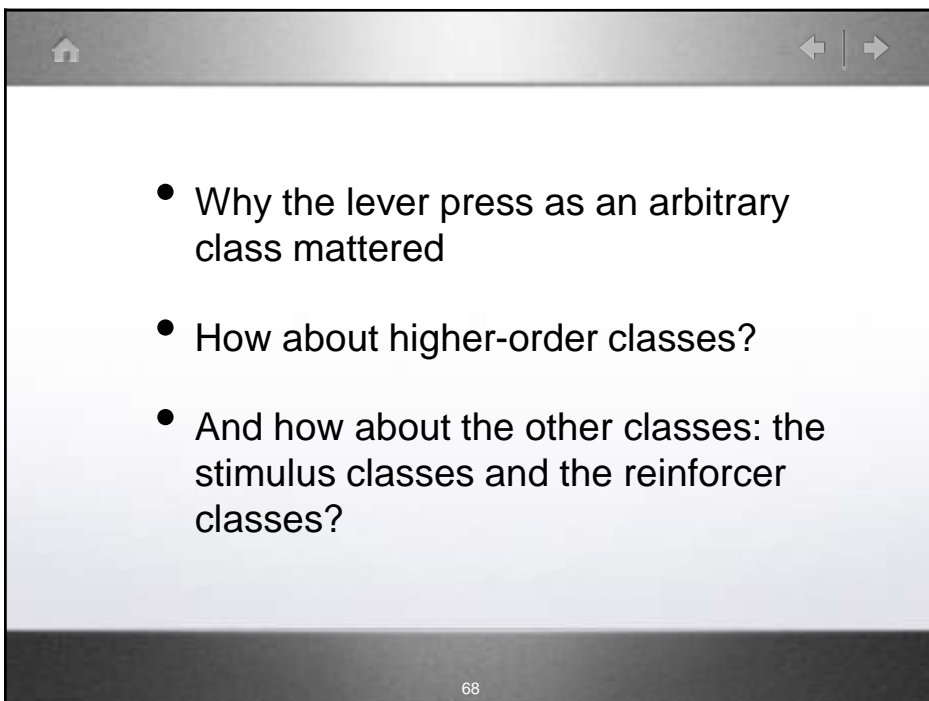

A presentation slide with a dark grey header bar containing a home icon on the left and navigation arrows on the right. The slide has a light blue gradient background. A single bullet point is centered on the slide. At the bottom, there is a dark grey footer bar with the number 67.

- Why the lever press as an arbitrary class mattered

67

A presentation slide with a dark grey header bar containing a home icon on the left and navigation arrows on the right. The slide has a light blue gradient background. Three bullet points are listed on the slide. At the bottom, there is a dark grey footer bar with the number 68.

- Why the lever press as an arbitrary class mattered
- How about higher-order classes?
- And how about the other classes: the stimulus classes and the reinforcer classes?

68

The Vocabulary of Differential Reinforcement				
<i>Differential Reinforcement (Procedure)</i>	<i>Concentration of Effects of Reinforcement (Outcome)</i>	<i>Spread of Effects of Reinforcement (Outcome)</i>	<i>Differential Reinforcement by Approximations</i>	<i>Class</i>
With Respect to Response Properties	Differentiation	Induction	Shaping	Operant
With Respect to Stimulus Properties	Discrimination	Generalization	Fading	Discriminated Operant

70

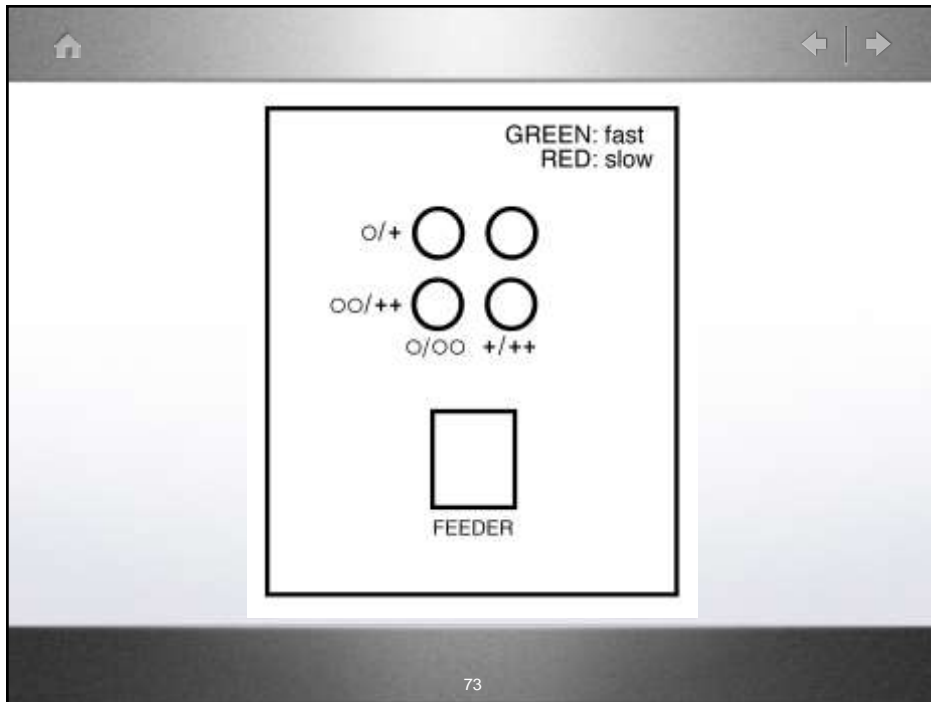

- Some Sources of Novel Behavior
 - Shaping
 - Direct reinforcement of novelty
 - Emergence based on higher-order classes
 - Adduction

71

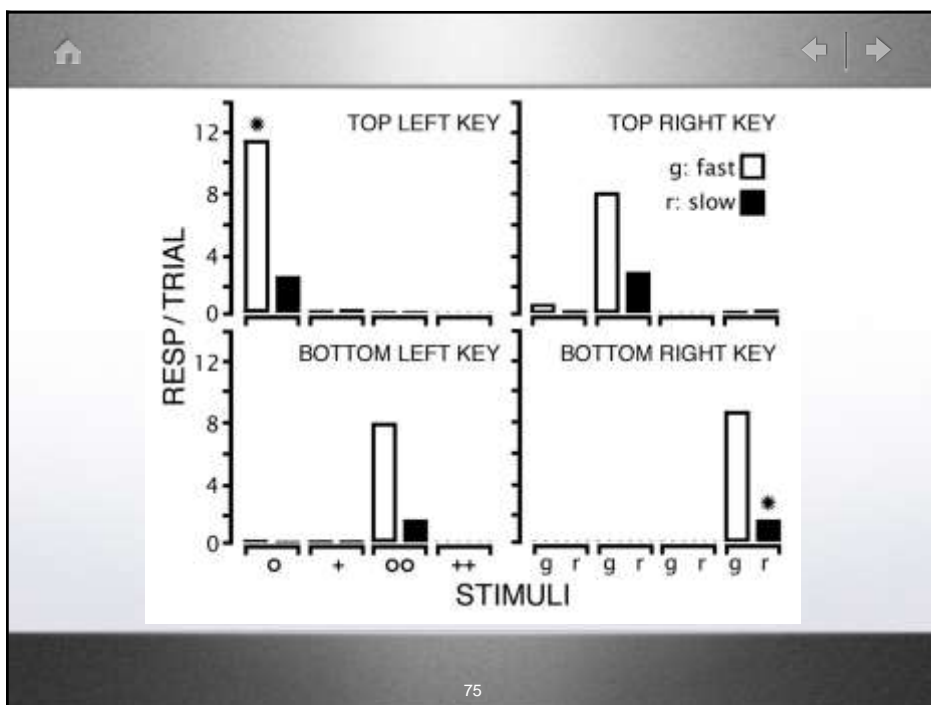

Sources of Novel Behavior

<i>Source</i>	<i>Definition</i>
Differential reinforcement in shaping, fading and the creation of operants	Creating new behavior by differentially reinforcing approximations to a new response or a new stimulus class; creating new behavior by reinforcing novel instances defined relative to the populations of which they are members
Emergence based on higher-order classes	Setting the occasion for new instances of the members of higher-order classes, including extensions of equivalence classes and frames
Combining behavior classes: adduction, transfer of function and their variations	Bringing the properties or members of different classes together in new ways; combining multiple sources of behavior so new functional classes emerge

72

73

75

This image shows a presentation slide titled "Topics". The slide has a dark gray header bar with a home icon on the left and navigation arrows on the right. The main content area is white and contains a bulleted list of topics. The last item in the list, "Stimulus Control and Attention", is highlighted in red. The slide has a dark gray footer bar with the number 78.

Topics

- Reinforcement, Extinction, and Their Side-Effects
- Contingencies, Contiguities, and Pairings
- Motivation: Establishing Operations
- Positive vs Negative Reinforcement
- Punishment
- Reinforcement as Selection - Shaping
- Operant Classes
- Stimulus Control and Attention

- Stimulus control (discrimination)
- What is the role of attention?
- Should we look at the stimuli or at the behavior?

79

80

Signal-Detection Contingencies in Breast Self-examination		
	<i>A lump is there</i>	<i>No lump is there</i>
<i>"Yes, a lump"</i>	Hit (Correct Positive)	False Alarm (False Positive)
<i>"No lump"</i>	Miss (False Negative)	Correct Rejection (Correct Negative)

81

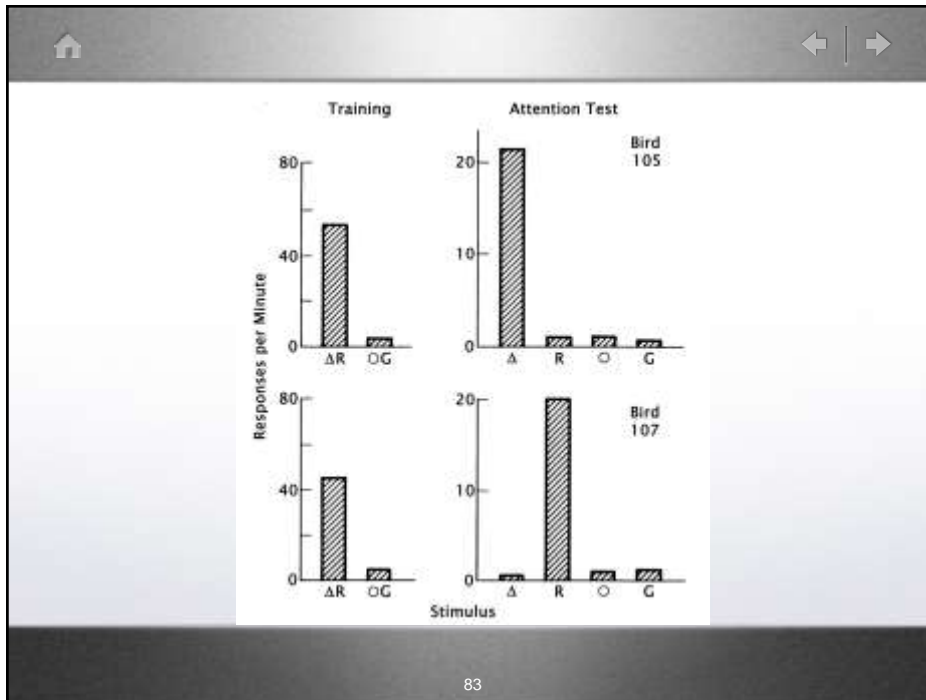

The Three-Term Contingency

In presence of S1, R1 may produce C1
 In presence of S2, R2 may produce C2

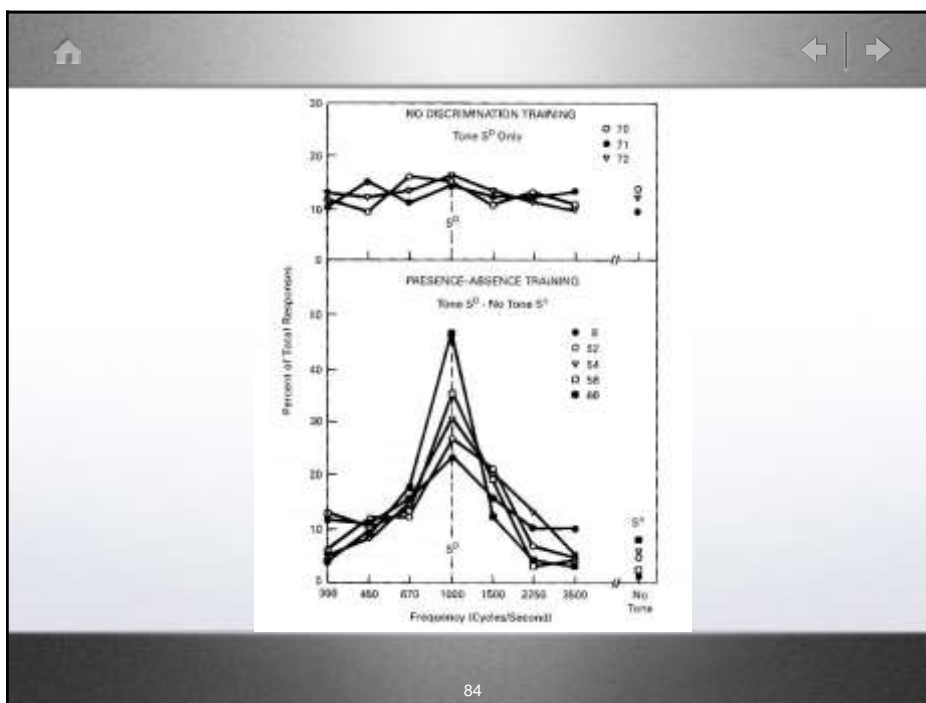

S = Stimulus
 R = Response
 C = Consequence

When R1 in presence of S1 differs from R2 in presence of S2,
 we say that the individual discriminates S1 from S2.

82

92

Creating a Conditional Discrimination

97

98

Observing Response Procedures

- Two pigeon keys:
 - The schedule key, on which pecks may produce food
 - The observing key, on which pecks do not produce food but may change whether relevant stimuli are available on the schedule key

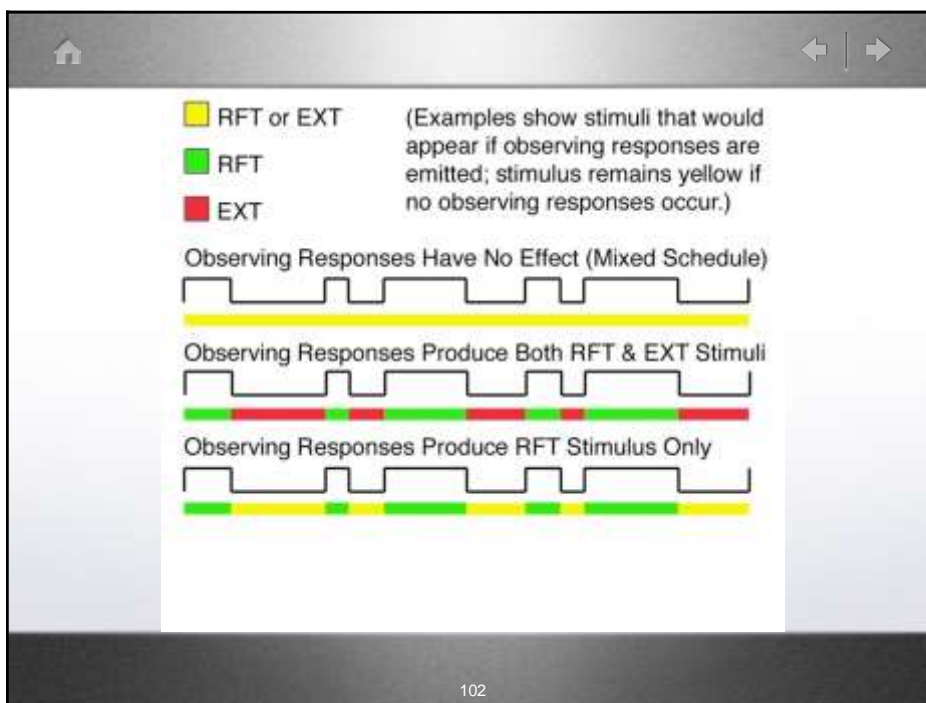

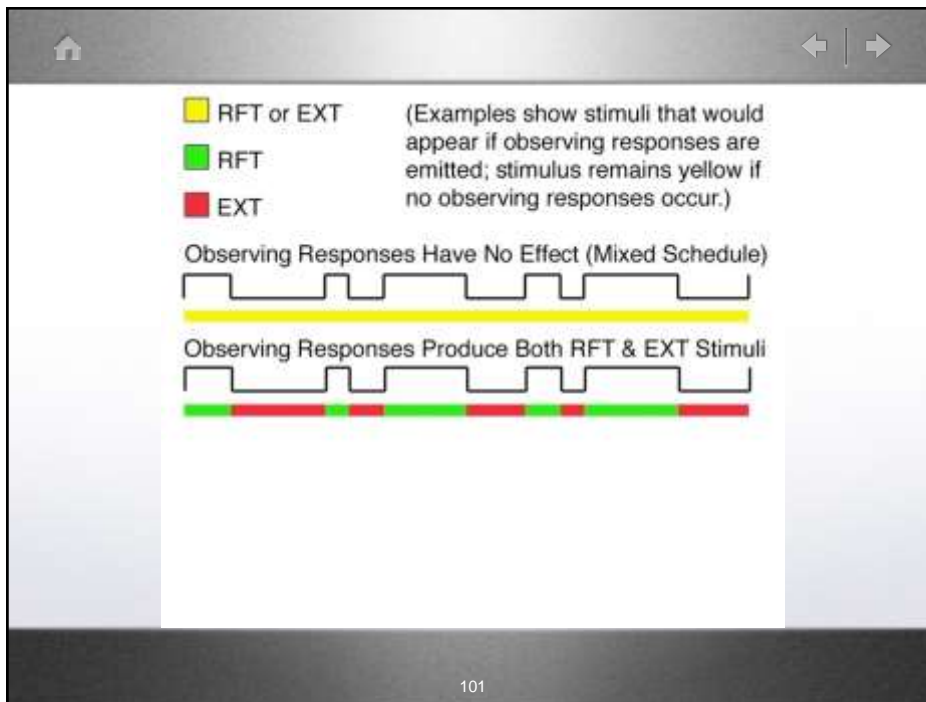

99

 RFT or EXT RFT EXT

Observing Responses Have No Effect (Mixed Schedule)

100

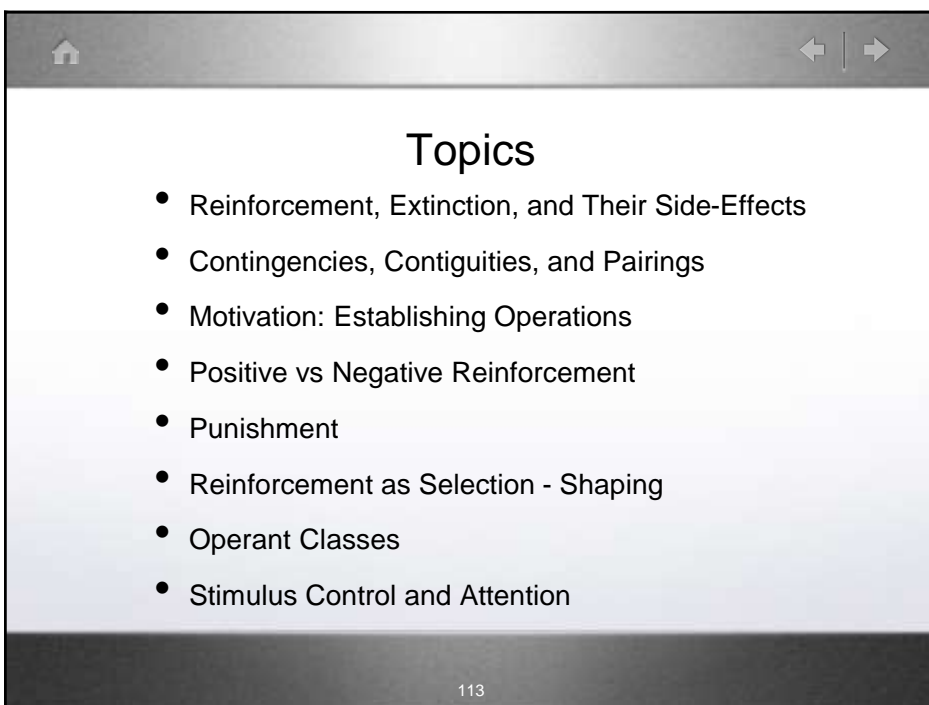

- Terminological issues in the language of stimulus control
 - The vocabularies of corrects and errors
 - The role of delayed reinforcement

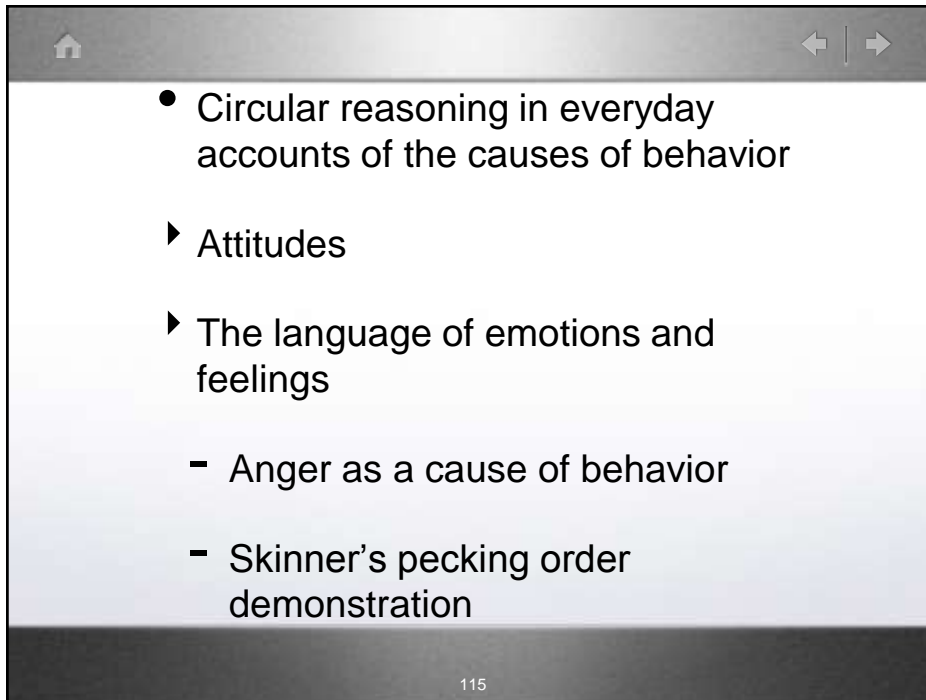

105

The relation between reinforcers and responses that precede them:
 at the top, only one response is followed by a reinforcer; at the bottom, many are followed, at different delays. Thus, the effect of the reinforcer is larger.

106

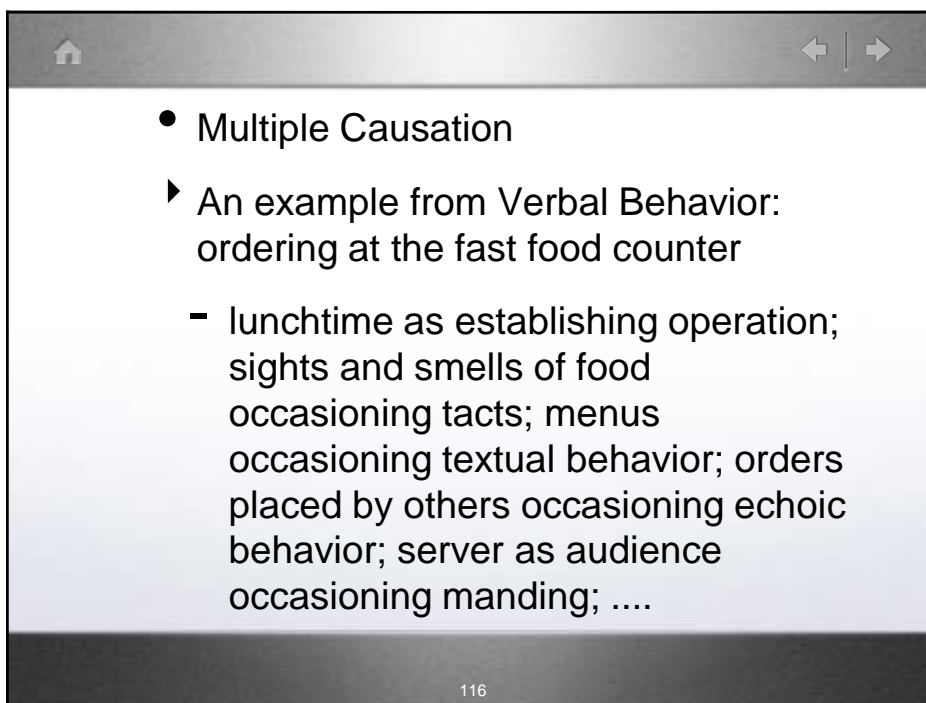

Slide 115 features a presentation window with a home icon, navigation arrows, and a list of topics. The list includes 'Circular reasoning in everyday accounts of the causes of behavior', 'Attitudes', 'The language of emotions and feelings', 'Anger as a cause of behavior', and 'Skinner's pecking order demonstration'.

- Circular reasoning in everyday accounts of the causes of behavior
 - ▶ Attitudes
 - ▶ The language of emotions and feelings
 - Anger as a cause of behavior
 - Skinner's pecking order demonstration

115

Slide 116 features a presentation window with a home icon, navigation arrows, and a list of topics. The list includes 'Multiple Causation' and 'An example from Verbal Behavior: ordering at the fast food counter'. The example lists various factors like lunchtime, sights and smells of food, menus, textual behavior, orders placed by others, echoic behavior, server as audience, and manding.

- Multiple Causation
 - ▶ An example from Verbal Behavior: ordering at the fast food counter
 - lunchtime as establishing operation; sights and smells of food occasioning tacts; menus occasioning textual behavior; orders placed by others occasioning echoic behavior; server as audience occasioning manding;

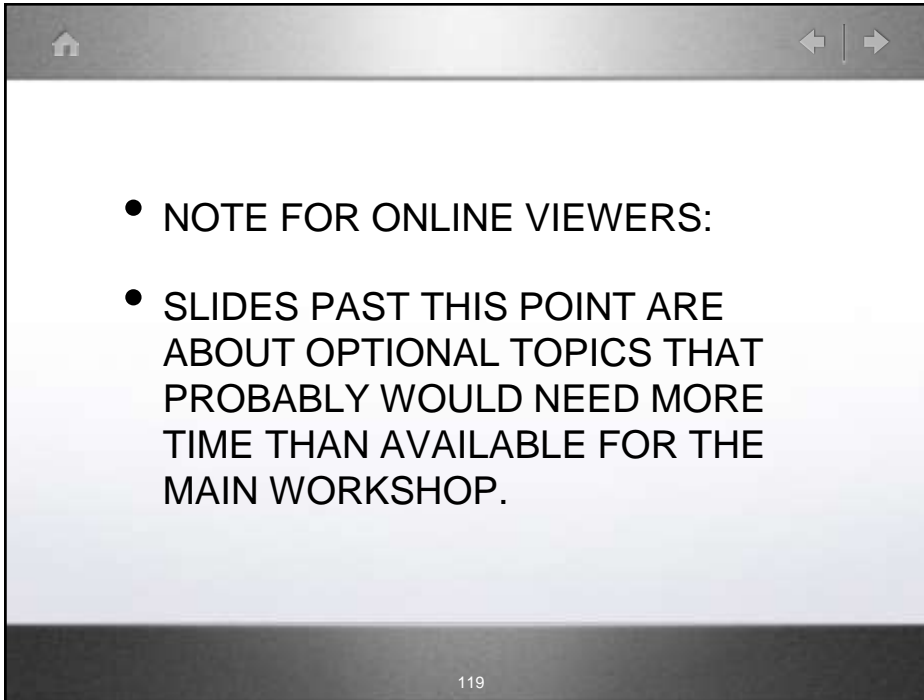

116

117

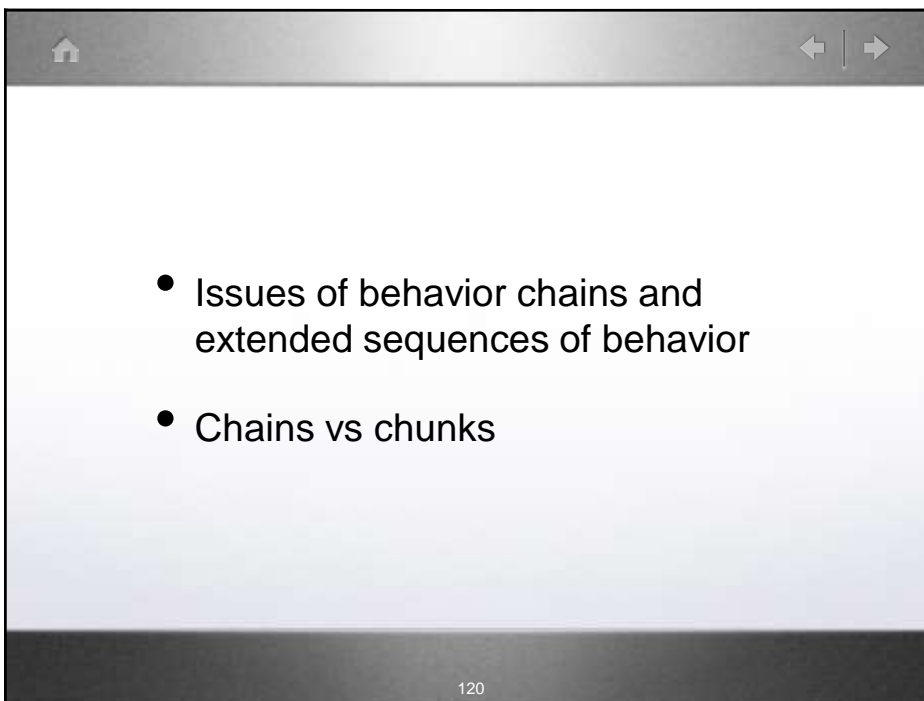

118

A presentation slide with a dark grey header bar containing a home icon on the left and navigation arrows on the right. The slide has a light blue gradient background. It contains two bullet points. The footer is a dark grey bar with the number 119.

- NOTE FOR ONLINE VIEWERS:
- SLIDES PAST THIS POINT ARE ABOUT OPTIONAL TOPICS THAT PROBABLY WOULD NEED MORE TIME THAN AVAILABLE FOR THE MAIN WORKSHOP.

119

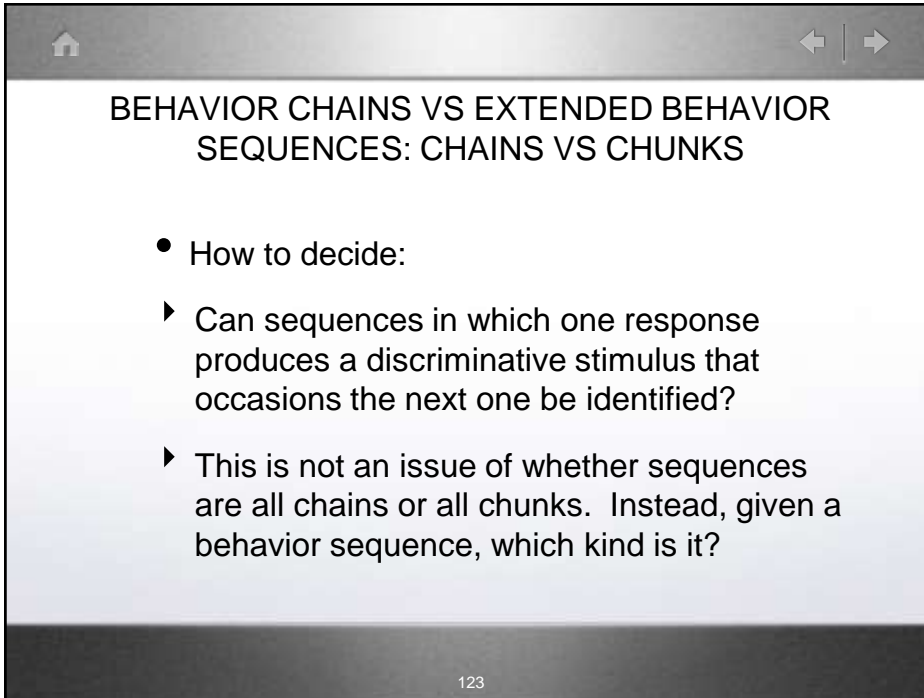

A presentation slide with a dark grey header bar containing a home icon on the left and navigation arrows on the right. The slide has a light blue gradient background. It contains two bullet points. The footer is a dark grey bar with the number 120.

- Issues of behavior chains and extended sequences of behavior
- Chains vs chunks

120

BEHAVIOR CHAINS VS EXTENDED BEHAVIOR SEQUENCES: CHAINS VS CHUNKS

- How to decide:
 - ▶ Can sequences in which one response produces a discriminative stimulus that occasions the next one be identified?
 - ▶ This is not an issue of whether sequences are all chains or all chunks. Instead, given a behavior sequence, which kind is it?

123

124

- Reinforcer classes in three-term contingencies
- Matching-to-sample as an example

125

126

	Matching comparison key	Sample A	Nonmatching comparison key	Matching comparison key	Sample B	Nonmatching comparison key
REFLEXIVITY						
Color Match						
Form Match						
SYMMETRY						
Arbitrary match (color-form)						
Reversal test (form-color)						
TRANSITIVITY						
Arbitrary match 1 (color-form)						
Arbitrary match 2 (form-intensity)						
Transitivity test (color-intensity)						
Combined reversal- transitivity test (intensity-color)
